For Immediate Release

American Boiler Company & EI Associates to Develop Exception6.com Remote Boiler Monitoring Service

Irvington, NJ. January 26, 2016—News Wire - American Boiler Company is pleased to announce it has signed a deal with EI Associates, a leading architectural, multi-discipline engineering and construction management firm since 1934, to develop a low cost remote boiler monitoring service.

The new service called Exception6.com provides an alternative to the “24 Hour Rule” requiring on-site boiler operators for boiler plants larger than 100HP (4,000,000 BTU). It is designed to fully comply with existing boiler code and boiler operator regulatory requirements. *“We are excited about the opportunity to partner with American Boiler Company and the value this service can deliver to customers who operate boiler plants that require 24 hour boiler operators. It’s a game changer. The price is right and it’s easy to use,”* says Robert Paine, P.E., LEEDAP, HBDP, EI Associates Director of Mechanical Projects.

EI Associates is a full service, architecture, multi-discipline engineering and construction management firm with offices in New Jersey, Pennsylvania and Delaware. With a diverse staff of over 150 planners, architects, interior designers, engineers, estimators and construction professionals, EI Associates is one of the largest architectural, engineering and construction firms in the Northeast. Contact Thomas Andrasz, RA, EI’s Sr. Vice President (ph: 973-775-7777, x181 / e: tom_andrasz@eiassociates.com) for further information.

American Boiler Company is a leading boiler sales, installation and service company that serves a variety of commercial, industrial, multifamily, educational, healthcare and governmental customers throughout the Northeast. The Exception6.com service uses a central monitoring station that is manned by black seal and blue seal boiler operators on a 24/7/365 basis. Sensors, controls and cameras are installed in the boiler room to monitor and control the boilers. Mr. Gary Frank, President said, *“Exception6.com uses the latest in State of the Art technology and is bringing boiler plants into the digital age. Customers using Exception6.com will improve the overall performance, efficiency and operation of their boilers. Customers can keep an eye on things from their phones or tablets and receive real time alerts & reports by text, email or phone call. Once in place, the Exception6.com service can be expanded to also monitor other critical systems within a facility such as sump pumps and ejectors at areas subject to flooding, as well as critical freezers and refrigeration equipment. EI Associates is an excellent firm. We know they are well equipped to handle the Exception6.com planning and design challenges and deliver true, value-based engineering solutions.”*
